

## CASE STUDY – Bladerunner 45GT

Ice Marine build specialised military vessels and small, very fast superyachts. The Bladerunner 45GT is the latest vessel to be launched from their Warsash facility. The design and build of these 50 knot, high quality craft requires attention to detail and experience - traits that Ice Marine and Argo Engineering share.

### PRIMARY TASKS

- *On-site support to the build team*
- *Management of the vessel's general arrangement & space management of the congested technical spaces*
- *Detail 3D modelling & drawings including: fuel & water system arrangements, system routings & seatings for machinery*
- *Management of weights & centres*

Argo's skills in bringing together weight sensitive structures, our composites expertise and our appreciation of the standard of detailing required to achieve superyacht quality helped to make this project a success.

Argo are proud to be associated with the BR45GT and wish Ice Marine future success with this exciting vessel.
